

How widespread is dyslexia?^{Shelly Bayer}

School Population

About 13-14% of the school population nationwide are identified as having a handicapping condition that qualifies for Special Education (SPED) services.

SPED
Students

LD
Students

One half of all students who are identified for special education are classified as having a learning disability (LD). About 85% of those students have a primary learning disability in reading and language processing.

Population as a whole

Up to 15-20% of the population as a whole may have symptoms of dyslexia, including slow or inaccurate reading, weak spelling, and poor writing. Not all will qualify for Special Education, but most benefit from systematic, explicit instruction in reading, writing, and language (AKA, Structured Literacy Instruction).
